Lighting with a Conscience

From Stephen Pikus Design in South Africa, the TRuK range is what we like to call “perfectly imperfect.”

Beginning life as engine air filters in diesel trucks, they are repurposed, refinished and upcycled to become beautiful metal lights. Due to their rough beginnings, the fixtures may show small blemishes and nicks. That’s part of their beauty. Just like humans, the fixtures retain hints of a past life and while they may be a little flawed, we think that they are perfect just the way they are.

Fixtures can be suspended as pendants or used as table lamps, and are UL/cUL listed for indoor or outdoor (dry/damp) use. Available in 4 sizes and 4 electroplated and powder coated finishes.
